

IDEAL partner for
identification & security

Identification and security

IDEal partner for
identification & security

ID Shop

Thanks to its ample experience and numerous challenges, the ID Shop has grown to its current position as the leading expert in the identification and security business in former Yugoslav territories. We are committed to keeping our enthusiasm and professionalism in the future since this is the only way to offer high-quality products and a superior level of support to the market. It is also of vital importance that we have our own production of certain popular products in Slovenia.

Our mission is to ease modern organisations' business and define a new standard of business cooperation in Slovenia based on honest communication, mutual trust and overall growth.

We do not see
problems,
we do not make
excuses. **We focus on
finding the solution.**

IDEal partner for identification and security

ID Shop has been offering solutions in the field of identification since 2002 which include products for the wearing and safe-keeping of employee identification cards. We have set up our own production for printing on cards and lanyards and for making cases. Gradually, we have extended our offer to the field of security since we wish to provide our clients with complete control over who enters their premises.

In the field of security, we now offer our clients solutions in the form of protected and patented systems for locking and access control. We base these solutions on years of experience with mechanical and mechatronic systems that are developed with their modularity and adaptability in accordance with the client's needs.

WHO DO WE PREFER TO CONNECT WITH?

-  **Businesses that find the security and the satisfaction of their employees to be of key importance.**
-  **Businesses that are interested in obtaining a business partner for long-term collaboration.**
-  **Businesses that pride themselves on thinking outside of the box, innovation and adaptability.**

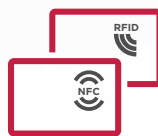

We are satisfied to notice improvement in our clients' work. We sincerely hope to leave a positive impression as well-just like retransfer printing leaves marks on smooth cards.

Identification

More than just identification.

Whatever can be printed on paper can almost always be printed on plastic. It is our goal to help you promote your brand or event and to increase security with custom-made cards, name tags and accessories in accordance with your brand and which separate you from your competition.

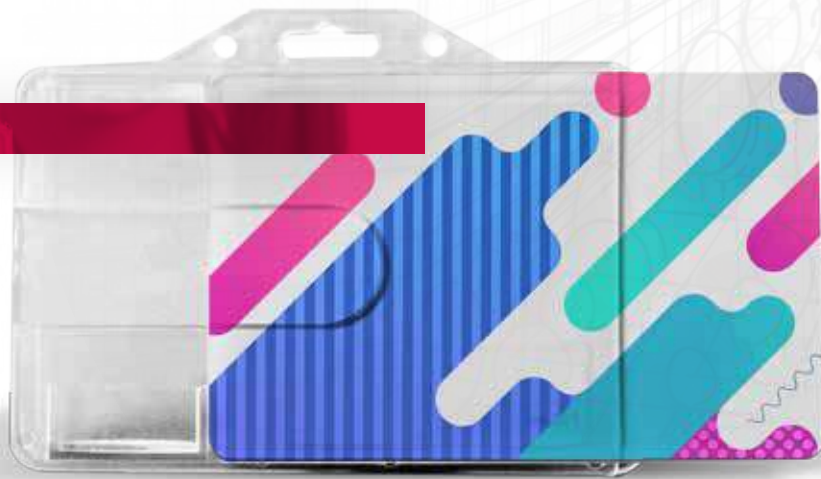

SOLUTIONS IN THE FIELD OF **IDENTIFICATION**

Everything for identification

Nowadays, organisations pay more and more attention to security in terms of identifying employees and visitors. ID Shop d.o.o. therefore pays special attention to finding the most appropriate solutions in this field.

Our offer is prepared so that in addition to card printing, we can offer you equipment and consumables for printing on cards as well as cards and other RFID media and accessories for protecting and wearing cards. Additionally, we have our own production of promotional lanyards and card cases.

CARD HOLDERS

BADGE REELS

LANYARDS

FASTENING SYSTEMS

Accessories for personal identification

Identification cards must be appropriately protected and at the same time within reach. Our own quality production of hard cases for identification cards allows the option of manufacturing identification accessories in accordance with your wishes and the image of your organisation.

Promotional lanyards

An excellent marketing tool

for conferences, festivals, seminars and sporting events. They can promote your company or serve as a gift for business partners. They also enable the practical wearing of accreditation, identification cards, keys, USB keys and mobile phones. In this way, your organisation will more easily gain recognition.

Personalised lanyard

We offer a varied selection of monochrome lanyards or lanyards with different designs, colours, materials and finishes. If required, we print your logotype, slogan and your company's colours on your lanyards so that the integrated image of your organisation is reflected on them and so that they can be used for various purposes.

The advantage of sublimation printing is in its incredible durability, high resolution and vibrant colours that do not fade and do not discolour when washed. This technique enables two-sided print in all possible colours. Sublimation enables printing on the entire surface of the product with colours penetrating deep into the material structure, so this is not just surface dyeing.

Printing Technique sublimation printing

Wristbands, XXL accreditation

The right solution for events

Fast and effective identification is necessary at many fairs, conferences, seminars, concerts, festivals, etc. Let us take care of identification and distinguishing between coordinators, organisers, visitors and exhibitors with accreditation or wristbands.

Accreditation

Accreditation can be equipped with a photograph, code, contactless chip, etc. It is possible to make XXL accreditation so that the image of your organisation is even more visible, and at the same time it offers enough space for the presentation of your sponsors.

Wristbands

Tyvek-paper or vinyl-plastic wristbands with a special method of attaching: economical, durable, waterproof and resistant to tearing. Incredibly strong, but still comfortable to wear. Available in many different colours, adjusted for various events, can be used as tickets as well.

Professional ID Shop name tags

Modern design and quality materials

Name tags are a part of every organisation that deals with clients. We offer different methods of attachment with a pin or a magnet to cater to different needs. The magnet attachment system is practical and reliable. With it, it is impossible to rotate the tag or to accidentally detach it, and at the same time there is no risk of damaging your clothes. Despite the incredibly strong magnet, you can remove the tag quickly and easily and reuse it again and again.

Different methods of attachment

Magnet

Super magnet

The advantages of our **name tags**

- Designed in accordance with your organisation's integrated image.
- Many colours, sizes and models are available.
- Modular design: it is possible to switch the name inserts as well as other printed inserts.
- Different methods of attachment.
- The final design depends on the chosen size of the transparent insert and the printed insert.

BASIC LEVEL

PRINTERS

ID Shop card printers offer a wide range of solutions in the field of printing and personalising of plastic cards. They enable you to independently make identification cards, cards for access control, membership cards, loyalty cards etc. while simultaneously saving you time, reducing your costs and increasing security.

SOFTWARE

Every printer contains CARDPRESSO for the ridiculously easy design and printing of plastic cards. It enables the use of software without requiring existing knowledge.

SUPPORT AND REPAIR

We take full responsibility for our work and always strive to find the most appropriate solution based on the client's needs and wishes, and we pride ourselves on responsive support and quality repair of card printers.

The differences between the thermal transfer and retransfer printing technologies

THERMAL TRANSFER or direct printing is the most common technology when it comes to tabletop plastic card printers. Direct technology uses a high temperature and the printer head to transfer the graphic from the ribbon to the empty card. This printing technology does not ensure a perfect coverage of the card with the graphic; there is always a very small surface on the edges of the card which is not printed on.

RETRANSFER technology is a two-stage printing procedure. In stage one, the printer head thermally transfers the entire graphic from the ribbon to the transparent film. In stage two, the graphic is transferred with the film to the empty card. In this case, the graphic is technically somewhere between the card's surface and the transparent film. This technology ensures 100% coverage of the card's surface with the graphic.

Thermal transfer printing

Retransfer printing

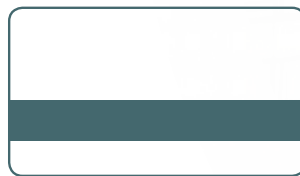

Cards and media

Key rings, cards, wristbands and stickers are used for different purposes: to track working hours, access control systems, etc.

Media is available in different technologies, colours and makes (contactless (RFID) and contact (SMART) cards). We also offer additional options of printing and personalisation.

Security

More than just security.

In order for your business to be even more efficient and most of all, more secure, ID Shop offers comprehensive solutions in the field of security. You can expect incredible adaptability, optimal security and impressive design. With our specific knowledge and the necessary experience, we are the perfect partner and we work together from the initial stages of the project on.

SOLUTIONS IN THE FIELD OF **SECURITY**

How to gain efficient access control?

In order for your business to be even more efficient and most of all, more secure, ID Shop offers comprehensive solutions in the field of security.

MECHANICAL LOCKING SYSTEMS

Each access control starts with mechanical cylinders and keys. Our cylinders enable all locking systems regardless of how complicated they may be.

ELECTRONICS

The mechatronic locks system gives you complete and efficient control without the expensive and time consuming wiring, and saves you time and money.

AIR-KEY

At the moment, this is the most innovative solution in the field of access with which you open doors with the NFC or Bluetooth technologies on mobile phones.

ON-LINE

A comprehensive system for management and complete control over online access control, visitors' rights, working hours, video control system and mechanical and mechatronic locking systems.

INNOVATIVE SOLUTIONS

.....
Comprehensive security solution for professional and simple use. Optimal security and impressive design.

More than security.

TRIPOD TURNSTILES

They are used for the access control of persons to specific buildings or premises. They are reliable, fast and easy to use. A well-tested control technique easily manages the flow during the busiest parts of the day. Advantages: Collapsible poles in emergencies (emergency exits) • Open under pressure • Functionality, speed and adaptability • Easy to use • Made from robust stainless steel • Good for outside installation • Long life span • Easy to install (unfinished floor option).

SUPPORT & EXECUTION

Our experts work with basically all economic and public institutions that use different levels of access systems. With our specific knowledge and the necessary experience, we are the perfect partner and we work together from the initial stages of the project on. Our biggest advantage is that we identify with our client and try to recognise the problem, solve the problem, and then perform a quality and professional installation.

KEY BOXES

A smart choice for organisations of all sizes which work with a large number of keys they wish to overview and control. The main purpose is to keep keys in one spot and at the same time enable access to these keys to authorised personnel only. The electronic key cabinet enables that:

- the employees unlock the cabinet with their ID card which can access only certain keys and within certain time frames.
- a scanner on the cabinet supports different technologies and it is possible to integrate with your existing access control system or

working hours.

- the administrator remotely manages employees' profiles: assigns rights, time frames, access to keys, etc.
- the information about the access to the keys (user, time of take over, time of return, etc.) is saved and it enables an accurate overview of the circulation of the keys in the organisation. The hard casing also guarantees intruder control in unsupervised spots. The built-in alarm system notifies you about unauthorised events in real time.

Security at a high level

MCS (PREMIUM PLUS)

This unique locking system is based on a combination of two technologies. Magnetic and mechanic coding offer solutions even for the most complex and demanding needs of locking and security. They offer complete legal, organizational, technical and technological approaches in case of unauthorized key copying.

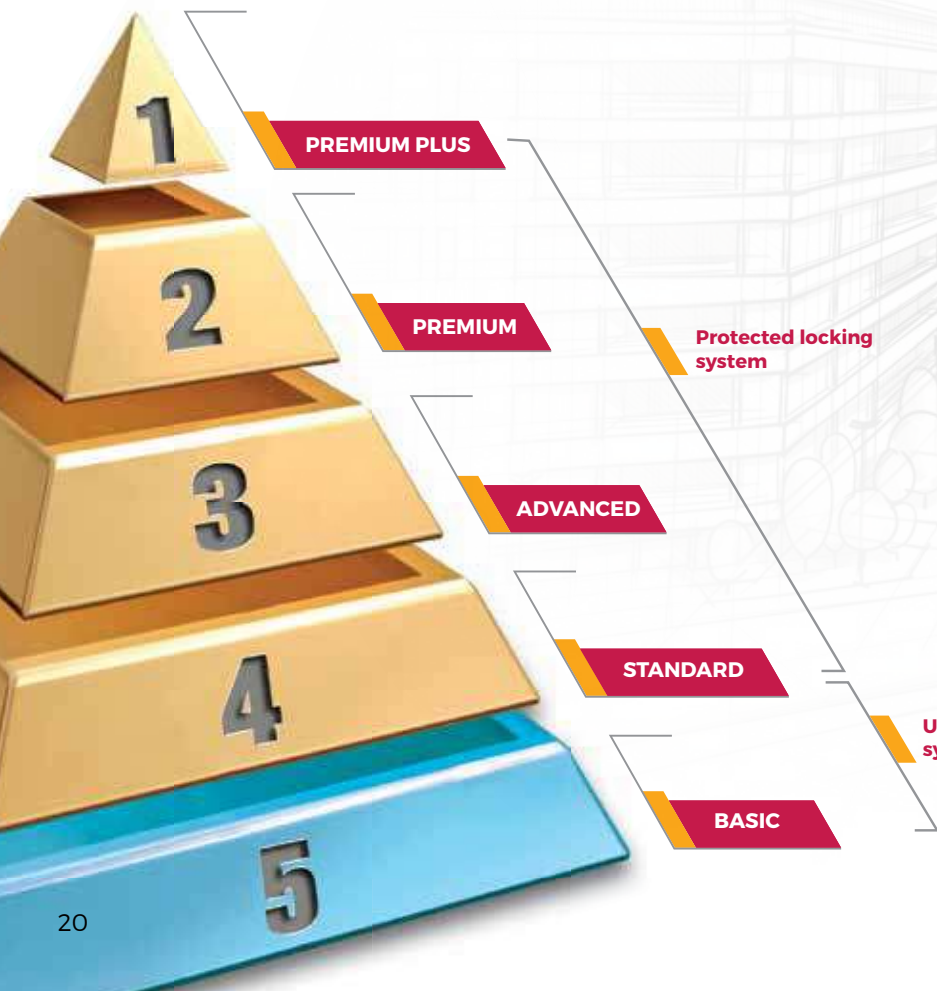

4KSplus (PREMIUM)

With its exquisite dual-sided key, this system stands out because of its unique, patented system without suspension. It is resistant to all weather conditions and appropriate for protecting more complex access points. Complete legal, organizational, technical and technological approaches in case of unauthorized key copying are supported.

ICS (ADVANCED)

This locking system is appropriate for well-structured systems of general locking. With hard, reverse key, ICS guarantees security and easy access. Complete legal, organizational, technical and technological approaches in case of unauthorized key copying are supported.

EPS (STANDARD)

This well-designed locking system fulfills the demands of the most up to date security technologies. Additionally, it offers a triple protection against unauthorized key copying with complete legal, organizational, technical and technological approaches.

The Space ID application is an all-in-one solution for tracing employees' working hours and managing access control

You will love the simplicity of use and you will be surprised at the results. Previous experience shows that within organisations, among other effects, productivity increases, employee loyalty is strengthened, and the attitude towards the workplace is changed.

Higher productivity (an increase in employee loyalty to your company).

The company's reputation (an increase in the recognition of your brand).

Security and savings (all-in-one solution with no additional costs).

Innovative design (comprehensive security solution for professional and simple use).

The system is appropriate for different fields of use (micro, small, medium-sized and large companies and non-profit organisations).

The program is adaptable according to the user's wishes and department.

App for easier and more transparent use. Time management, controlling of working hours, and access limitations for each of your premises.

- A click away from information about employee presence, anytime and anywhere
- An additional security element for your business premises
- Remote management of entry into the facility
- Events and history are easily printed in the form of a report (salary and overtime calculations)
- An adaptable system provides your own desired settings and grows with you
- We take care of the system upgrades and maintenance.

The advanced access system

Media are available in different technologies, colours and makes (contactless (RFID) and contact (SMART) cards). We also offer additional options of printing and personalisation.

ADVANTAGES

- Low costs
- A wide variety of components
- Unlimited flexibility
- Innovative design
- Simple installation

New working practice and employment in terms of security indicate constant changes and upgrades of the system for the physical access of employees and visitors to organisations. For this purpose, security systems in buildings and work places must be adaptable and flexible without major procedures. With mechatronic locking systems you will guarantee all of this without unnecessarily wasting your time and means. The existing mechanical locking system can be upgraded anytime with the mechatronic system without cabling to increase security.
